multimedia catalog

MultiMedia Catalog: archive and manage your images, video and documents

Main features:

- Store as many images, video files and files of any type and format as you need! Restricted only by your hard disk capacity. All the required files can be placed to one record with unlimited number of fields with text information about patient.

- Import images from any digital devices which are equipped with TWAIN or DirectShow drivers directly to active database record.

- Network access.

- Smart import from disc allows automatic separation of files by time and place.

- Importing new files to record is as easy as drag-and-dropping to the thumbnail bar.

- Fast text search: start typing 1-3 first letters to see the matching records.

- Retrieve your patient data using all the text you have entered to record fields. Filtering by any number and combination of keywords will let you find required data sets fast.

- Easy changing database structure in visual mode: add text, numeric or date fields to describe your data sets.

- Make the most important image processing operations like cropping, image brightness, contrast and color adjustment, rotation and flip. Enhance images with filters.

- Direct access to your favorite image processing software. After processing, the image can be easily returned back to the database through Windows clipboard.

- Manual measurements in real units.

- Print out attractive reports.
